

Agentic AI Systems Engineering – 4-Day Accelerated Version

Commercial Description (Short)

This **4-day intensive training** delivers a **highly compressed, practical introduction to Agentic AI systems**, focusing on reasoning workflows, RAG, multi-agent orchestration, and production considerations.

Participants will build **end-to-end agent workflows** using LangChain, LangGraph, and n8n, progressing from **single-agent systems to coordinated multi-agent architectures**.

⚠️ Trainer Advisory:

This version is **highly condensed**. It is designed for **fast exposure and prototyping**, but **not recommended for deep engineering mastery or production readiness**.

4-Day Condensed Course Structure

Day 1 – Agent Foundations & Reasoning + Tooling

- Agentic AI vs LLM pipelines
- Agent roles (planner, executor, tool agent)
- Structured reasoning:
 - CoT, ToT (practical usage)
- Advanced tool usage & function calling

Lab: Build a reasoning + tool-enabled agent

Day 2 – Context Engineering, Memory & RAG

- Context engineering fundamentals
- Memory systems (short + persistent)
- Agentic RAG:
 - Retrieval + reasoning loops
- Improving grounding & reliability

Lab: Build memory-enabled RAG agent

Day 3 – Multi-Agent Systems & Orchestration

- Workflow patterns (sequential vs dynamic)
- LangGraph basics (nodes, edges, state)
- Multi-agent coordination:
 - Planner–Executor architecture
- n8n introduction (visual orchestration)

Lab: Build guided multi-agent workflow

Day 4 – Production Concepts + Capstone

- Observability (LangSmith intro)
- Evaluation & performance checks
- Safety & guardrails
- **Capstone Build (compressed):**
 - Multi-agent + RAG + memory system

Output: Working prototype + architecture walkthrough

Key Adjustments in 4-Day Version

- Reduced depth in:
 - LangGraph advanced workflows
 - Multi-agent coordination patterns
 - Evaluation & observability
 - Capstone is **shortened and guided heavily**
 - Fewer demos & limited exploration time
 - Less debugging and iteration time
-

5-Day vs 4-Day Comparison

Aspect	5-Day Version	4-Day Version
Learning Depth	✓ Strong depth	⚠ Moderate, compressed
Hands-on Stability	✓ Balanced (~60%)	⚠ Faster, less iteration time
Multi-Agent Coverage	✓ Detailed (design + patterns)	⚠ Basic + guided only
LangGraph Mastery	✓ Proper understanding	⚠ Intro-level implementation
Observability (LangSmith)	✓ Practical usage	⚠ Intro/demo level
Capstone	✓ Complete & structured	⚠ Compressed prototype
Production Readiness	✓ Near-ready (guided)	✗ Conceptual only
Demos & Use Cases	✓ Multiple per session	⚠ Limited selection
Best For	Engineering teams building systems	Awareness, quick upskilling
Trainer Recommendation	✓ Recommended	✗ Not recommended for deep learning

Trainer Recommendation (Important)

The **4-day version sacrifices critical depth in orchestration, observability, and system evaluation.**

✓ Suitable for:

- Fast-track learning
- Executive/technical overview
- Initial experimentation

✗ Not suitable for:

- Production implementation
- Complex multi-agent systems
- Teams needing strong hands-on capability

Trainer strongly recommends the 5-day program as the minimum effective duration
